responsibility.
Shaping the
future.**

Sustainability

at ulrich medical

dedicated to you.

Ecological responsibility

A responsible use of resources is central to our operations. By using our own combined heat and power plant and harnessing waste heat from manufacturing for heating purposes, we reduce energy consumption and actively lower CO₂ emissions.

To support climate-friendly mobility, we are steadily expanding our electric vehicle fleet and promoting sustainable alternatives such as bike-to-work schemes.

We are also driving ahead with digitalization to enable increasingly efficient processes and sustainable ways of working.

Reduction of site-related CO₂ emissions by **29.5%** through installation of a combined heat and power plant ¹

Sustainable ideas are rewarded with a **25%** higher bonus.

All on-site transport vehicles are fully electric, supported by an in-house charging infrastructure with four charging points

On-site beehives and a sustainably managed wildflower meadow to promote biodiversity

¹Independent report by Inova, 2021. Data on record.

Social responsibility

Our workforce of 600-plus employees benefits from **targeted support measures**, along with a wide range of health promotion initiatives and programs that foster community engagement.

We take on **social responsibility** within our organization and in the wider community.

Trust and integrity are core values of our corporate governance, supported by a whistleblower system.

With a trainee percentage of 4.9%, we actively develop young talent and thereby secure our long-term competitiveness.

Support for social organizations through long-term partnerships

Health programs including colorectal cancer screening, hearing and vision tests, blood donation campaigns

Additional leave for volunteer work

Employee benefits including company fitness programs, childcare support, and retirement plans

Economic responsibility

Made in Germany:

Our manufacturing location in Ulm enables short transport routes and fast response times.

Long-term investments in infrastructure and our workforce ensure reliable supply and sustained innovation.

Sustainable investment
for a stable future

Reliable supply via
short transport routes

Secure planning due
to development and
manufacturing in
Germany

Products designed responsibly

We help health institutions to reduce waste and use resources more efficiently. In both radiology and spinal surgery, we take a holistic approach that spans the entire product life cycle.

Our **contrast media injectors** combine a multiple-use design and intelligent software to minimize material consumption, packaging waste, and unused contrast media.

Our **spinal systems and implants** are also designed with sustainability in mind: manufacturing in Germany ensures short transport routes and reliable supply chains.

Optimized sustainable packaging for disposables

Sustainable logistics and reliable supply for hospitals

Integrated system approach for a smarter use of contrast media
