

EFFICIENT CONTRAST MEDIA ADMINISTRATION

BOOST

your CT routine

dedicated to you.

A male technician with short dark hair, wearing blue medical scrubs, is focused on adjusting a component of a large, white and blue medical machine. The machine has several transparent blue protective covers. In the foreground, a large, semi-transparent orange circle with a white border contains white text. The background is a clean, clinical setting with light-colored walls and a door.

**Because every
minute counts
in everyday
CT practice.**

When time pressure and flexibility must go hand in hand

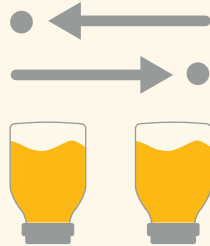

The multi-contrast media management of the CT motion SPICY enables time-saving, efficient, and flexible processes – without changing the 24-hour pump tubing.

With the CT motion, you can adapt the choice of contrast media to the examination:

Tandem function

At the touch of a button, switch between contrast media with identical active ingredients in different concentrations or between Omnipaque and Visipaque.

- Flexible contrast media selection
- Select the contrast media at the touch of a button, without interrupting the workflow
- More patients per day

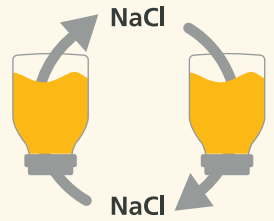

Optimized for different requirements in everyday CT practice:

Extended tandem function

Thanks to a reliable rinsing program, safely switch flexibly between contrast media with different active ingredients and from different manufacturers.

- Free choice of contrast media
- Without interrupting the workflow
- More variability for each examination

The ESUR Guidelines 2025 recommend changing the contrast media in the event of hypersensitivity reactions. CT motion SPICY provides the necessary flexibility – **without changing the 24-hour pump tubing.**

Efficient and flexible contrast media administration in everyday CT practice

Same patient

When further injections are required for the same patient

- Simple selection of additional injections
- Without changing the patient tubing
- Smooth processes without interruption
- Ideal for vein checks and special examination protocols

Heater for original media container

When reliable and precise injection conditions are required

- Optimized contrast media viscosity
- Greater patient comfort

Adjustment of bolus parameters during a manual pause

When flexibility is required during the examination

- Easy adjustment of the injection protocol
- More control for each injection

Same flow for all boluses

When rapid adjustments are required

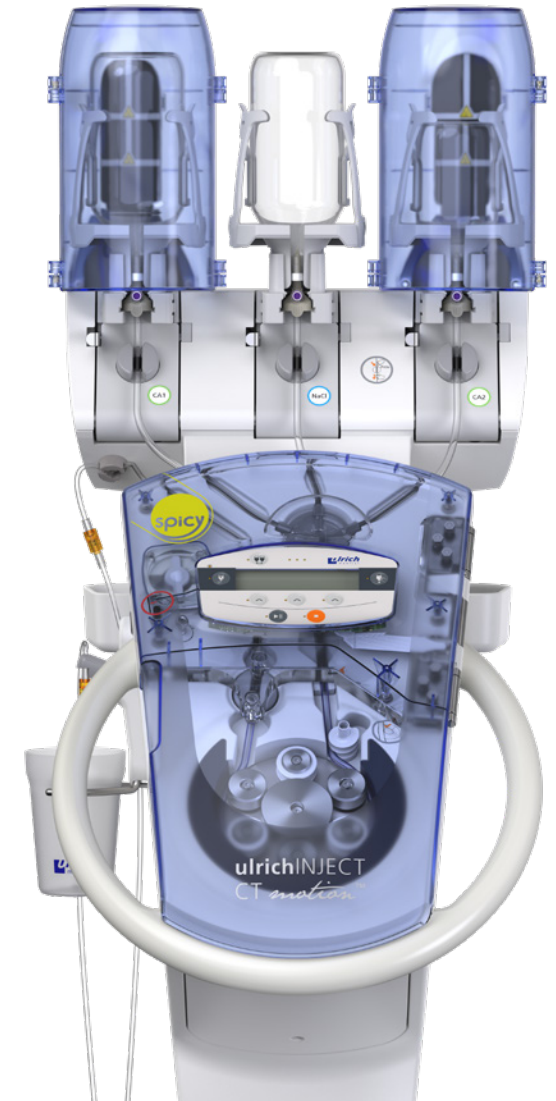

- Setting the flow for all boluses with just one click
- Direct response to changing requirements

40 boluses per protocol

When standard protocols are not sufficient

- Free configuration of injection protocols

CT motion™ SPICY

Made for people who move forward.

dedicated to you.
